VIKING INDUSTRIER

CAMPING CABIN 25M2 WITH EXTENSION

PRODUCT DESCRIPTION

To all the lovers of comfort and nature, this Camping Cabin can offer the best of both worlds. Big and spacious, it has the potential of becoming your new vacation or holiday home. Country style cabin can be painted in various colours of choice to fit any garden or campsite.

The cottage can be modified to fit your desires. You can choose to add more extensions, heater, chimney, furniture. The height of the cabin can also be adjusted, but the standard extension's size is 1.83 x 1.70 m. If you want to enjoy your getaway house all year round, there is also a possibility to insulate the floor and the roof with 5cm thick stone wool, which would keep the cosines of the cabin even through the coldest winter.

The light comes in through 5 windows (3 of them are opening). Each window is double glassed which helps to maintain stable temperature in the cabin.

Camping Cabin is delivered to the customer not assembled, but detailed step by step instructions and drawings make the process of building the cabin easy and enjoyable.

FOUNDATION

It is very important to have a proper foundation for your Cabin. Therefore, we recommend making the foundation according to the sketches here. First, the foundation must be prepared according to the landscape and ground conditions.

- The foundation under the product must be prepared specially, it must be homogeneous, tight and even. It must be ensured that the foundation will not change its properties. We recommend using a concrete foundation.
- Before the installation of the product, we recommend using hydro isolation for the foundation.
- Consult a local qualified builder or an engineer to prepare a proper foundation, which fits your location.
- Due to the improper foundation, structures may crack. Due to uneven product seating, the geometric shape of the building may change, which can result in twisted doors/windows, or/and a gap may appear. The worst-case scenario – the building may collapse.

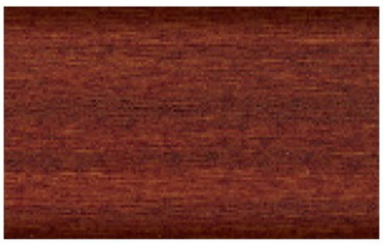

If you do not follow recommendations for building the base, the product will lose its warranty!

COLOR CARD

PLEASE NOTE: The colors shown in the catalogue and website may not 100% match the color you will receive. The color of the wood material affects the final color.

PAINTING

AUTOMATIC MACHINE SPRAY TECHNOLOGY
Benefits

One of the main and most obvious benefits of using a paint machine is the speed and flexibility at which we can suggest our painting service for all of our products. A spray paint machine can get the work done faster and more consistently than manually painting. While the machine works faster, it improves quality too – sprayers produce an even coat of paint, leaving a high-quality finish.
With our painting service from now, we can suggest to our client maximum flexibility! Not assembled products such as Grill cabins, Pavilions, Camping pods, and other products of any size you can order painted too!

PROFESSIONAL SPRAY

The high-quality preservative finish is professionally spray applied in the factory to three sides of the wood. The product is treated in your choice of color. You can choose two colors for one product: one for almost all product details and another for finishing details.

STAIN | PAINT
Which type of paint should I Use?

Properly painting and impregnating is one of the most important things to consider when thinking about how to extend your product's lifetime.
Paint and natural wood finish instantly spruce up the aesthetics of your product.
The decision you will need to make is if you want to use a water-based wood stain or paint. Both will offer you UV protection. The wood stains will allow the texture of the
wood to show through and many are now available in a vast range of colors, however, paints will give you an intensive color, but will cover the grain and texture of the wood.

USAGE AND MAINTENANCE

Things to note when using the product:

- Products that are used for staying overnight should be equipped with a smoke alarm and an extinguisher;
- The product owner is responsible for the security and should work out a rescue plan for the camping site;
- Remember that using heating appliances or temporary camping stoves isn't just a fire risk, but a risk of carbon monoxide poisoning as well.

MAINTENANCE. You should not forget that wood is a natural material, it changes move depending on weather conditions. Large and small cracks, color tone differences and changes, as well as a changing structure of wood are not errors, but a result of wood growing and a feature of wood as a natural material. Natural wood (not impregnated) becomes greyish after having been left untouched for a while and can be turned blue and become mouldy. You should immediately process them with wood impregnations to protect the wooden details of our produced products.

- Like any our product, our produced furniture's needs to be looked after and processed with a wood impregnation agent or painted if you want it to last for years. Regular cleaning of your furniture is necessary to prevent mould. General warm soapy water is enough if done regularly;
- If necessary, outside doors must be adjusted by the customer;
- If you do not use your Camping Product often we highly recommend to use the installation of our vent to stop condensation;
- If you find a sap pocket open during the life of your Product - you can allow it to dry naturally and then cut the sap off with a blade.
