With minimal maintenance you can keep your product looking perfect!

Read and follow all instructions carefully before installing and using this product:

INSTALLATION

PLANNING PERMISSION

Our Camping Products are considered in planning law as designed for short term human habitation placed on land.

Planning permission is required if you are considering buying multiple units.

BASE/FOUNDATION

It is very important to have a proper base for your Camping Product. Therefore, we recommend following our sketches and consulting a qualified local builder or engineer. Making sure that the base for your product fits the location is of utmost importance.

Due to an improper base, the structure may crack. If the product is unevenly seated, the geometric shape of the building may change, which can result in the door/windows twisting, and/or gaps. In the worst-case scenario, the product may even collapse.

- Before building the base, make sure you take into account the landscape and the ground conditions on which the product will stand.
- The base under the product must be prepared specifically for your Camping Product.
- The base must be homogeneous, tight and level.
- Make sure that the properties of the base do not change over time. We recommend making the base out of concrete and water-proofing it before installation.

If you do not follow recommendations for building the base, the product will lose its warranty!

ASSEMBLY

Please refer to our assembly guide for instructions.

PAINTING AND IMPREGNATION

! We strongly recommend impregnating the exterior part of the door and windows using a wood impregnator because otherwise the door and windows can become twisted. In general, we recommend consulting a specialist about paints suitable for unprocessed softwood and following the instructions of paint manufacturers. Properly painting and impregnating the Camping Product will extend its lifetime. We also suggest thoroughly inspecting the product every six months and checking whether it requires re-painting.

It's NOT advisable to paint the walls of the Camping Product before assembling it – this is best done in good weather and after it has already been assembled. However, if you wish to use different colors, then it may be a good idea to paint before assembling it.

USING YOUR CAMPING PRODUCT

COMMERCIAL USAGE

- Products which are used for staying overnight should be equipped with a smoke alarm and a extinguisher.
- Product owner is responsible for the security and should work out a rescue plan for the camping site.

ATTENTION !
USING HEATING APPLIANCES OR TEMPORARY CAMPING STOVES THIS IS A RISK OF CARBON MONOXIDE POISONING!

MAINTENANCE

Wood is a natural material and can change through time. Cracks of various sizes, structural or color changes are not the defects – rather, they are features of the wood. Natural wood (not impregnated) becomes grayish after being left untouched for a while. Later it can turn blue and get covered with mold.

USE WARM SOAPY WATER FOR REGULAR FURNITURE CLEANING

- Like any our product, our produced furniture's needs to be looked after and processed with a wood impregnation agent or painted if you want it to last for years.
- Regular cleaning of your furniture is necessary to prevent mold. General warm soapy water is enough if done regularly;
- If necessary, outside doors must be adjusted by the customer;
- If you do not use your Camping Product often we highly recommend to use the installation of our vent to stop condensation;
- If you find a sap pocket open during the life of your Product - you can allow it to dry naturally and then cut the sap off with a blade.

AS ALWAYS, THE MAIN RULE IS - ENJOY!
