With a minimal maintenance you can keep your Cabin or Pavilion looking perfect!

Read and follow all instructions carefully before installing and using this product:

FOUNDATION

- It is very important to have a proper foundation for your Cabin. Therefore, we recommend making the foundation according to the sketches that you can find in our website.
- First, foundation must be prepared according to the landscape and ground conditions.
- **The foundation under the product must be prepared in a special way, it must be homogeneous, tight and even. It must be ensured that the foundation will not change its properties. We recommend using concrete foundation. Before installation of the product, we recommend to use a hydro isolation for the foundation.**
- Consult a local qualified builder or an engineer to prepare a proper foundation, which fits to your location.
- Due to improper foundation, structures may crack. Due to uneven product seating, the geometric shape of the building may change, which can result in twisted doors / windows, or/and a gap may appear. The worst-case scenario – the building may collapse.

If you do not follow recommendations for building the base, the product will lose its warranty!

INSTALLATION

- **The distance from the chimney to the cooking table should be approx 50 cm.** Otherwise, the room can be filled with smoke.
- For your safety, we strongly recommend that you don't use metal Grill until it is fixed to the floor!
- Please refer to our assembly guide for instructions.

USE

- **The first time you'll use your Grill the surfaces of the new product that are in direct contact with the flames may create a smoky smell when heating up.** We advise to keep the door open during the first use and not to cook until the smell disappears.
- When burning wood we recommend to use Grill table metal safety fence.
- **We suggest you to use only firewood or briquettes.** Larger burning objects can be added later when the fire is burning well. We advise to use objects no larger than 300 mm.
- A sufficient flow of fresh air is the most essential aspect of smoke exhaustion. At least as much fresh air should come in as goes out with the smoke.
- If the Grill is generating a lot of smoke, open the door of the Grill Cabin or the Pavilion and make sure that the wood is dry and without a bark. Put in additional dry wood if needed.
- Keep decorations away from your Grill. Hanging decorations look pretty, but provide fuel for a fire.
- Keep water nearby for flare-ups.
- **Keep a fire extinguisher within a couple steps of your Grill.** And KNOW HOW TO USE IT!
- **Don't leave a Grill unattended.** Don't allow kids or pets to play near the Grill. Never try to move hot Grill, and remember the Grill will stay hot for at least an hour after its use.
- Do not sleep in a Grill Cabin or Pavilion when the fire is on!
- Use protective gloves when handling hot cooking plates. **Never move or service an operating Grill.**
- Please note, that the metal Grill may have sharp edges and the steel parts of the Grill heats up when the fire is burning, therefore there is risk to harm or burn yourself.
- Remove ashes from the Grill after they have cooled down.
- Make sure you give yourself time to clean your Grill after each use in order to ensure maximum hygiene and proper functioning.

**USE ONLY FIREWOODS
OR BRIQUETTES.**

CABIN MAINTENANCE

You should not forget that wood is a natural material, it changes and moves depending on weather conditions. Large and small cracks, color tone differences and other changes, as well as a changing structure of wood are not defects, but a result of wood growing and a feature of

wood as a natural material. **Natural wood (not impregnated) becomes grayish after being left untouched for a while, and can turn blue and become moldy. You should immediately process it with wood preservative to protect the wooden parts of our manufactured products.**

We definitely recommend that **you process the door and windows with a wood preservative, and do it on both sides (inside and outside)**, because the doors and windows can deform. Also, you should pre-treat the floor panels with a wood preservative, especially the bottom sides of the panels, to which you will no longer have access when the Cabin or Pavilion is assembled. Only this will prevent moisture penetration.

In general, we recommend for the conclusive finishing a weather protection paint that will protect wood from moisture and UV radiation after the Cabin is assembled. Consult a specialist regarding paints suitable for unprocessed softwood and follow the paint manufacturer's instructions. Your Grill Cabin or Pavilion service life will be much longer after it will be properly painted. We recommend that you inspect your Cabin thoroughly once every six months.

Customer should make sure that air circulation is working in winter as well. It means that air pipes are open all year around and that moisture gets out from the product (through chimney). Customer should also make sure that product's roof is not covered by snow. A layer of snow cannot be thicker than 20 cm on the roof and the flue should never be covered by snow or closed manually.

GRILL CLEANING

Make sure you give yourself time to clean your Grill after each use in order to ensure maximum hygiene and proper functioning:

After using your Grill, wait a sufficient amount of time until the burning materials are cold before you start cleaning it, but do not pour cold water on to the charcoal.

Remove ashes and dust into a rubbish bin using a tool to thoroughly scoop it out.

Prepare a bowl of soapy water or a spray bottle of Grill cleaning fluid. Then use a Grill brush and cleaning sponge for cleaning.

Ensure that no food is left on the Grill before covering and storing it in prepared position for its next use.
